Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Positivism is the belief that human knowledge is produced by the scientific interpretation of observational data. The approach has been an ongoing "theme in the history of western thought from the Ancient Greeks to the present day". The term was used in the early 19th century by the philosopher and founding sociologist, Auguste Comte.
