## LIST OF LARGEST FISH - WIKIPEDIA

### **jawless fishes world volume pdf**

Lampreys (sometimes inaccurately called lamprey eels) are an ancient, extant lineage of jawless fish of the order Petromyzontiformes, placed in the superclass Cyclostomata.

### **Lamprey - Wikipedia**

The cartilaginous fish are not directly related to the "bony fish," but are sometimes lumped together for simplicity in description. The largest living cartilaginous fish, of the order Orectolobiformes, is the whale shark (*Rhincodon typus*), of the world's tropical oceans.

*Bothriolepis yeungae* modified from Johanson 1998). To suit my own ill-informed prejudices on the matter, the tail has been reduced in size, and the body and head have been adjusted to suggest a more vertical orientation of the lateral plates.

### **Palaeos Vertebrates: Placodermi: Antiarcha**

La lamprea marina (*Petromyzon marinus*) es una especie de pez agnato del orden Petromyzontiformes. Esta especie se distribuye por la zona templada del hemisferio Norte, con una amplia presencia en Europa y Norte América.
