varicose veins and spider pdf

Varicose veins are twisted veins that can be blue, red, or skin-colored. The larger veins may appear ropelike and make the skin bulge out. Varicose veins are often on the thighs, the backs and fronts of the calves, or the inside of the legs near the ankles and feet.

Varicose veins and spider veins | Womenshealth.gov

spider veins, but still under 3-mm are called reticular veins. Symptoms. Varicose veins may be entirely symptom-free and cause no. health problems. Treatment in such cases is often for cosmetic purposes. When symptomatic, varicose veins may cause ankle and leg swelling, heaviness or tension, aching, restlessness, cramps and itching. Varicose veins are more often symptomatic in women than in ...

Varicose Veins - VascularCures

Varicose veins are usually caused by weak vein walls and valves. Inside your veins are tiny one-way valves that open to let the blood through, and then close to prevent it flowing backwards. Sometimes the walls of the veins become stretched and lose their elasticity, causing the valves to weaken.

Varicose veins - Causes - NHS

Varicose veins develop when the small valves inside the veins stop working properly. In a healthy vein, blood flows smoothly to the heart. The blood is prevented from flowing backwards by a series of tiny valves that open and close to let blood through.

Varicose Veins and Spider Veins: 22 Things You Need to Know

Symptoms of varicose veins include feeling of tension, heaviness, or swelling in the legs, night cramps, pain, itching, pins and needles, or tingling in the legs.

Spider veins and varicose veins

been known that varicose veins in the legs are caused by weakening of the veins and valves in the great saphenous veins and/or

small saphenous veins. When the valves in these malfunction, blood begins to collect in the legs resulting in the buildup of pressure. The veins become enlarged and knotted and are visible near the surface of the skin as a varicose vein (Figure 3a and b). Major valves ...

CHAPTER Anatomy, Physiology & 188 Classification of

Some varicose veins and spider veins can be treated by sclerotherapy, which is the injection of irritant chemicals (sclerosants) into the affected vein. The irritant prompts the vein to spasm and collapse in on itself. In time, the walls of the collapsed vein heal together, and the sealed vein can no longer carry blood.

Varicose veins and spider veins - Better Health Channel

Varicose veins are enlarged (dilated) sections of veins which are located just under the surface of the skin - usually on the leg. They are often easy to see, as they look thick and knobby. They may be less obvious if you are overweight, as they are hidden by fatty tissue under the skin.
