Genome-wide association studies (GWASs) implicate the PHACTR1 locus (6p24) in risk for five vascular diseases, including coronary artery disease, migraine headache, cervical artery dissection, fibromuscular dysplasia, and hypertension.

A Genetic Variant Associated with Five Vascular Diseases

In biology, adipose tissue, body fat, or simply fat is a loose connective tissue composed mostly of adipocytes. In addition to adipocytes, adipose tissue contains the stromal vascular fraction (SVF) of cells including preadipocytes, fibroblasts, vascular endothelial cells and a variety of immune cells such as adipose tissue macrophages.

Adaptive optics (AO)-enhanced en face retinal imaging, termed here AO ophthalmoscopy (AOO) has reached a level of robustness which fuels its increasing use in research and clinical centers.

Adaptive optics ophthalmoscopy: Application to age-related

A brain tumor occurs when abnormal cells form within the brain. There are two main types of tumors: malignant or cancerous tumors and benign tumors. Cancerous tumors can be divided into primary tumors, which start within the brain, and secondary tumors, which have spread from elsewhere, known as brain metastasis tumors. All types of brain ...

x Hematopoietic stem cell transplantation is curative for many disorders, including autoimmune disorders, genetic immunodeficiencies and malignancies; however, it can be associated with significant morbidity and mortality, often as a result of graft-versus-host disease (GVHD) [1].

Biology of Blood and Marrow Transplantation Home Page

MR imaging is the most sensitive imaging technique to depict brain lesions as altered signal intensities. Most of the lesions are demonstrated as hyperintensities on T2-weighted MR images, and the signal intensity itself is nonspecific.
