(PDF) Vegetation, Water, Humans and the Climate

This chapter provides a brief theoretical framework to explain how and why the land surface can affect weather and climate. The key equations that describe how energy and water are exchanged ...

Vegetation, Water, Humans and the Climate

Vegetation is a general term for the plant life of a region; it refers to the ground cover provided by plants, and is, by far, the most abundant biotic element of the biosphere.

Vegetation - ScienceDaily

VeWa is funded by the European Research Council (ERC) and will examine the impacts of climate change on vegetation-water linkages along a northern climatic gradient investigating six intensively studied experimental sites in the UK, US,

Canada and Sweden.

KEY CONCEPT Human activities affect soil. 248 Unit 2:Earth's Surface. Land-use practices can harm soil. The way people use land can affect the levels of nutrients and pollution in soil. Any activity that exposes soil to wind and rain can lead to soil loss. Farming, construction and development, and mining are among the main activities that impact soil resources. Farming Farming is very ...
