Modern diesel cars (since 2009) have to be fitted with a Diesel Particulate Filter (DPF) in the exhaust to stop this soot passing into the atmosphere. The aim is an 80% cut in particle emissions but the technology's not without problems and our patrols are often called to cars with a blocked DPF.

From the primary filter, the fuel is drawn by fuel transfer pump and is delivered to fuel injection pump through second fuel filter. The fuel injection pump supplies fuel under high pressure to the injectors through high pressure pipes. The injectors atomise the fuel and inject it into the combustion chamber of the engine. The fuel injection pump is fed with fuel in abundance. The excess fuel ...

filter media. Fuel Filtration Overview Donaldson's third generation of Synteq fuel filter water separator media uses both cellulose and meltblown synthetic layers to achieve the highest levels of fuel filtration performance. This double-layered media increases particulate holding capacity and is a high performance water separator. It has the ability for high efficiency emulsified water ...

The fuel filter also traps any water in the fuel and you should drain it at regular service intervals, or sooner if the engine is suffering from misfiring. Draining water The fuel filter is usually fitted with a drain tap or plug to drain off the water.

If your vehicle is equipped with an inline fuel filter it is recommended that the filter is replaced on a yearly basis or approximately every 15,000 miles. Having the fuel system cleaned approximately every 20,000 miles with a professional decarboning and fuel system cleaning service to keep the buildup of fuel byproducts to a minimum.

[How Do Vehicle Fuel Systems Work? - All About Automotive](#)

A fuel filter is a filter in the fuel line that screens out dirt and rust particles from the fuel, normally made into cartridges containing a filter paper. They are found in most internal combustion engines. Fuel filters serve a vital function in today's modern, tight-tolerance engine fuel systems.

FUEL INJECTION Electronic gasoline fuel-injection systems from the mid 1970s to the mid 1990s and later are all very simple. In the event of a restricted fuel filter or line blockage, the pump is capable of producing pressures of 700 kPa (100 psi) or higher. An excess pressure valve (relief valve) is built into the pump. Gasoline and Diesel Fuel Injection: Operation, Diagnosis, and Service ...

Gasoline and Diesel Fuel Injection: Operation, Diagnosis

has been one brand of fuel filtration systems that has earned the confidence and respect of engine and ... Leading-edge technology and continuous innovation are designed into every system, and genuine Aquabloc® filter elements have set the global standard. In every configuration, at every flow rate and in any operating environment, Racor is the most trusted name in engine protection. Why ...

Fuel Filtration Systems - SEALL

Secondary fuel filter (143) provided downstream of a fuel pump (92) has a smaller pore size than a primary fuel filter (141) provided upstream of the fuel pump. The secondary fuel filter is covered with a case member (171) and positioned along a center frame (23) of the vehicle. The secondary fuel filter is made of non-woven fabric and formed ...
